

Testing Certificate

We, Vervali Systems Pvt Ltd, hereby certify that we have tested the Right2Vote Infotech Private Limited's Voting platform including:

1. Android Application
2. iOS Application
3. Website

We found the platform to be of very high quality and free of any bugs. We have tested the platform for more than 6 months starting September 2016 to April 2017 and can state that platform has been designed very well with not only very advanced features but also is very easy to use for the user and provides a very good user interface and user experience.

We also certify that the platform has given lot of importance to security of votes and have advanced security features like:

1. **Mobile OTP based authentication** while log in
2. **Mobile OTP based authentication** of voter before voting
3. **Aadhaar based authentication** of voter before voting

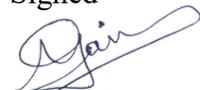

The above features even individually make the platform very secure. The **two-stage verification process** is very safe and is considered gold standard for security even for banking and fintech companies.

The company is using **Amazon Cloud Services (AWS) cloud servers** for cloud computing and data storage. AWS is one of the best, if not the best cloud server provider in the world and it maintains very high level of security and encryption for data on its servers.

The company has also implemented **Secure Socket Layer (SSL) certification** for the platform. SSL certificate is considered the gold standard of security for online transactions. SSL ensures that data is transferred on the networks in encrypted format and safe from any kind of hacking.

Based on the above we certify that Right2Vote Infotech Pvt Limited's voting platform is a very high quality, user friendly, easy to use and highly secure voting platform.

Signed
